

# INSTANT ENGINEERING RESOURCE

## Increased agility in your current capabilities

aap<sup>3</sup> provide a number of Cisco certified engineers who can be deployed within 24 hours throughout Europe. Our engineers work on contracts for Cisco when not with partners, giving them full access to the Cisco environment and keeping them up to date with the latest technologies.

We have a number of experienced, qualified CCNA, CCNP, CCVP and CCIE engineers who are employed by us and available to ramp up and down your network teams as and when required. Our engineers will 'wear your t-shirt' when engaging with your clients and will always act with your best interest in mind.

### Our Network engineers

All of our engineers are employed by aap<sup>3</sup>, we take care of all HR, pay-roll and training requirements and financially encourage them to increase their qualifications and experience. Before being offered a job with aap<sup>3</sup> the candidates go through; a first selection interview; if successful they return for a more thorough assessment including a technical exam, presentation and second interview. This process ensures all of our engineers are technically sound but can also provide effective communication to you and your customers.

### Cisco Certification Levels:

CCNA  
CCNP  
CCVP  
CCIE

### Engagements:

Short-term  
Long-term  
Project Based

Mike Kemp - an aap<sup>3</sup> engineer:

I have been with aap<sup>3</sup> for a year. I am based at Cisco, Bedfont Lakes and have been involved in a number of Cisco initiatives and providing IT support for John Chambers, CEO of Cisco. When not involved in these projects I have been utilised throughout the Cisco partner community. I have gained invaluable experience and have progressed from CCNA to CCNP. "

# How do we engage?

From one engineer for one week, or a team of engineers for a network pre-staging project, to a year-long project to build and staff a highly visible IT Technical Centre offering support to employees, **aap<sup>3</sup>** can help.

We ask that the project or statement of work be forwarded to your account manager. Upon receiving this document we will offer you a number of suitably skilled engineers that are available. We will set-up a call or meeting between your project leader, our engineer and our engineering manager to ensure that our engineer is suitable for the job and is fully briefed before the job begins.

We pride ourselves on the quality of our engineers and encourage you to contact us with all your Cisco engineering requirements.

## Tailored Resource

**aap<sup>3</sup>** have a commitment to the local communities it supports. As part of this commitment we also run a unique apprenticeship program, in which it employs engineers from the Cisco Network Academies and places them to work with you.

The program introduces the apprentices to you, your projects and your way of working. This enables you to get the job done whilst also identifying and investing in future network engineering talent without having to worry about the HR, payroll and training – it even gives you the option to hire this talent at a later date.
