

Cosmos - **Application Development Services**

Software Solutions ▶▶

Integrated Solutions e.g. Sharepoint

- Collaboration Tools.
- Custom Form Design and Implementation.
- Integration into Office Tools, e.g. Word, Excel.
- Systems Integration.
- Document Management and Workflows.
- Web Site Publishing.

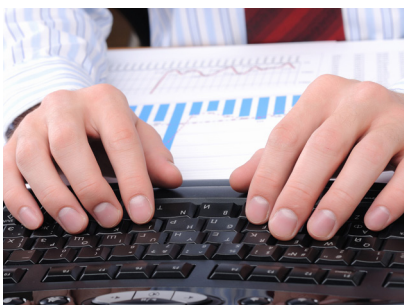

“Innovative solutions to accelerate your business”

Bespoke application development:

aap³ will design and build to your exact specifications using the latest software development technologies. Our highly skilled and experienced software engineers and project managers can **deliver rapid results** and enable business performance for your time-critical projects.

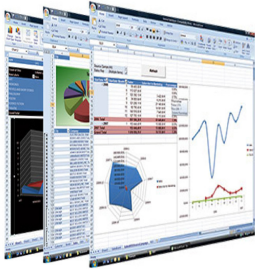

Some examples of where our Application Development Services can fit are;

- Design, build and implement new software systems for specific business requirements, from HR and Finance applications to Marketing and Operations.
- Automation of repetitive tasks or where you need to ‘enhance’ an existing set of tools/processes.
- Rapid development of solutions for time sensitive projects.
- Interim short-term applications to enable business functions now.
- Custom / bespoke one off solutions (perhaps application integration).
- Analysis of business problem and guidance on possible solutions.
- Testing, documentation and solution training.
- The technical guidance and expertise to upgrade your existing tools in order to benefit from the latest available tools and technologies (e.g **SharePoint**).

Our bespoke application development technologies include:

- Collaboration Tools
- Custom Form design and implementation
- Integration into Office Tools, e.g. Word, Excel

.NET framework with SQL Server

This area covers the development of dynamic data driven web based applications, from internal thin client business applications to external data driven sites, such as E-Commerce, Extranets and custom Portals. Combining the power and stability of .NET with the proven data handling capabilities of SQL Server, scalable affordable solutions can be designed to match your precise requirements.

Reporting and Database design and development

This area involves not only the creation and management of databases across different platforms, such as SQL and Oracle, but also developing and designing reports using SQL Reporting tools, such as SSRS. Also part of this area is the development of stored procedures and views that provide data used by web / windows / office based applications. Finally, performance monitoring in terms of database design and hardware performance are also key areas that we have expertise in. The main technologies used are SQL Server 2008, SQL Server 2005, SSAS, SSRS, SSIS, Oracle, ODBC Connectivity and OLAP

A major advantage to using **aap³** Application Development Services is our **fully integrated solutions offerings**. We can create the entire web-enabled and back office windows based solutions together in one fully integrated solution. Our skill-sets cross the traditional boundaries of Creative, Web, Database and Bespoke Software Development. The power to be able to have one software vendor design, build, deliver and support a full end-to-end software solution is something many key companies have recognised.

By **integrating web technologies** into your data reporting systems, key reporting information can be presented in easy to use and understood Web and Multimedia interfaces. Whether you want to publish data internally or to your clients via an Extranet, **aap³** is uniquely placed to help you make your data more accessible, understandable and productive for your business
